

Drain Filter - 1300mm x 1300mm x 600mm

SKU: DFA13600

Drain Filters, crafted from polypropylene non-woven geotextile fabric, are installed beneath drain grates to capture contaminants, debris, and sediments, preventing their entry into stormwater drains. Easy to install without concrete cutting or drilling, they can be trimmed to size post-installation.

Drain Filters are positioned below drain grates to secure the filter, effectively trapping contaminants, debris, and sediments to prevent their entry into stormwater drains. Made from polypropylene non-woven geotextile fabric, these filters act as dependable mediums for filtration. They are easily installed without the need for concrete cutting or drilling and can fit stormwater drains up to 1300mm x 1300mm x 600mm, with the flexibility to be trimmed for smaller drains. Operating akin to gross pollutant traps, the Drain Filter allows runoff water into the pit, where it swirls within the filter. Particles larger than the fabric's pore size are captured within the geotextile drain filter.

Product Applications:

- Carparks
- Delivery docks
- Service areas
- Industrial plants

Product Features:

Efficiently captures contaminants, debris, and sediments Simple installation without concrete cutting or drilling
Geotextile material adaptable for smaller drains

Specification

density: 260GSM
colour: Black
pore-size: 90 micron
flow-rate: 80L/m²/sec
material: Geotextile
