

Heavy Duty Flood Tube - 940mm x 10m

SKU: HFTA10

Our FloodTube barriers are designed to shield against water runoff and flooding. Constructed from PVC material, they're robust, easy to set up, and compact for storage. Inflatable by water, they provide a strong base for effective water diversion.

Our FloodTube barriers stand as a testament to innovative engineering, meticulously crafted to shield against the threats posed by water runoff and flooding. With a design tailored specifically for such challenges, these barriers offer a robust defense against nature's forces. Constructed from high-quality PVC material, they boast durability and reliability, ensuring long-term protection for properties and infrastructure. Their intuitive setup process makes them accessible for users of all levels, while their ability to be compactly stored away ensures convenience when not in use.

Key Features:

- Australian-made, guaranteeing superior quality and craftsmanship.
- Engineered to effectively combat water runoff and flooding, providing peace of mind for property owners.
- Constructed from robust PVC material, offering durability and longevity.
- Easy setup process ensures quick deployment during emergencies.
- Compact storage design enables convenient storage when not in use.
- Requires a fire hose fitting for filling, ensuring efficient and hassle-free deployment.

Specification

density:	610GSM
tensile-strength:	2695N/5cm
welding-adhesion:	88.2N/5cm
temperature-resistance:	-30? to +70?C
