

Heavy Duty Flood Tube Stabilizer

SKU: FTSTABA

Our FloodTube Stabilisers are tailored to secure Heavy Duty FloodTubes, like the 940mm x 20m version, preventing rolling when filled. They should be attached to the FloodTube before filling. It's advised to purchase 2 Stabiliser packs with a 20-meter Heavy Duty FloodTube for optimal stability.

Our FloodTube Stabilisers are meticulously crafted to prevent any movement of our 940mm x 20m Heavy Duty FloodTube. Consisting of two smaller tubes and a velcro attachment, these stabilisers connect to the larger tube, serving as a stabilising force as water is added to the FloodTube. To fill the stabilisers, a fire hose fitting is necessary, ensuring a secure and efficient process. For optimal stability, we recommend purchasing two stabiliser packs alongside a 20m Heavy Duty FloodTube.

Product Features:

- Australian-made for superior quality and reliability.
- Specifically engineered to stabilise large Heavy Duty FloodTubes.
- Crafted from robust PVC material, guaranteeing durability and longevity.
- Fire hose connection required for filling.

Specification

density:	610GSM
tensile-strength:	2695N/5cm
welding-adhesion:	88.2N/5cm
temperature-resistance:	-30? to +70?C
